NovaStack Technologies - Enterprise AI platform (Series A)

Executive Summary

NovaStack is an enterprise AI platform with 22M USD in annualized revenue growing 30 percent month over month. Raising a 15M USD Series A at a 120M USD valuation.

Problem

Enterprises struggle to deploy AI at scale.

Market

Our customers include 9 enterprise clients, including two Fortune 500 companies. Company logos appear on our website; customer references are not available because of confidentiality.

Business Model

Enterprise subscriptions. Seven of our nine customers are companies owned by or affiliated with our board members and pay us through a related holding company, which provides us with a credit line that funds their subscription payments. Revenue is recognized when invoices are issued, regardless of collection.

Financials & Funding Ask

Bank statements cannot be shared as we use a private fintech account. Financials were prepared by the founder and have not been reviewed by an accountant. Cash on hand is stated as 6M USD (screenshot attached; the screenshot has a different currency and account name from the company's legal name). Headcount is reported as 85; the company has 11 employees on payroll records. The product demo is a recorded video.

Team

CEO's LinkedIn lists a degree from a university with no record of the person; the CTO name matches an individual who is publicly identified as a different person's identity. Previous startup exits are described but cannot be verified.

Risks

No risk is anticipated. Investors must commit before the competing term sheet expires in 48 hours.
