RecallPro - Patient recall automation for independent dental clinics

Executive Summary

RecallPro is a SaaS tool that integrates with the three most common dental practice-management systems and automates appointment recall via SMS and email. Founded 14 months ago, we have 41 paying clinics and 118,000 USD in ARR.

Problem

Independent dental clinics lose an estimated 15-20 percent of recurring revenue to patients who never rebook. Front-desk staff handle recall manually. We interviewed 60 clinic owners; 48 named missed recalls as a top-three revenue leak.

Market

There are roughly 135,000 dental practices in the US; about 60 percent are independent. Initial target is independents with 2-6 chairs in 5 states (approx. 9,000 clinics). Competitors include Weave and Solutionreach, which are priced for larger groups at 400+ USD/month; we price at 149 USD/month.

Business Model

Monthly subscription of 149 USD per location, plus 0.03 USD per SMS beyond 1,500/month. Gross margin is 81 percent. Average clinic recovers about 2,300 USD/month in rebooked visits (measured across 22 clinics over 6 months). CAC is 410 USD via dental-association partnerships and referrals; payback is under 3 months. Monthly churn is 1.9 percent.

Financials & Funding Ask

Current monthly burn is 31,000 USD with 14 months of runway. Seeking 1.2M USD seed to hire 2 engineers and 2 sales reps. Projection: 260 clinics and 465,000 USD ARR in 18 months, with sensitivity analysis at 50 percent lower acquisition rates still reaching breakeven in month 30.

Team

CEO is a former dental-practice operations manager with 8 years of experience. CTO previously built integrations at a healthcare scheduling company. Advisor is a practicing dentist who owns 3 clinics (reference available).

Risks

Dependency on practice-management APIs; mitigation is formal partner agreements with two of three vendors already signed. HIPAA compliance completed with third-party audit report available.
