For founders who need to know if the idea is worth a year of their life.

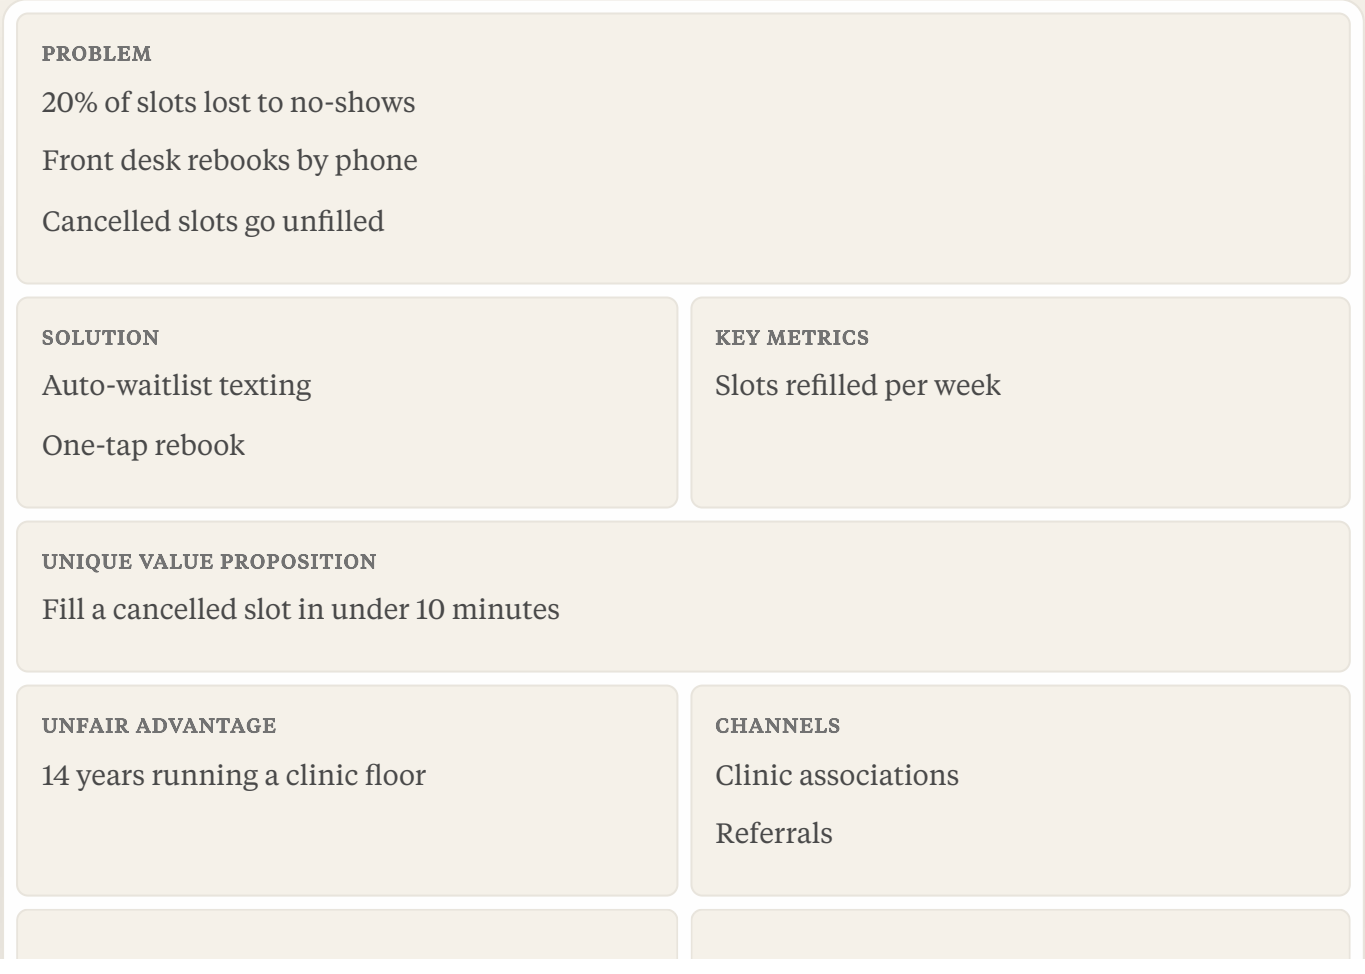

Anyone can fill in a Lean Canvas. *Knowing which box will sink you is the hard part.*

Describe your idea in plain English. LEANSpark builds your canvas, stress-tests every box, and names the one assumption to test first, before you spend a year finding out.

What is a Lean Canvas?

Lean Canvas is a 1-page business model template created by Ash Maurya in 2010. It adapts Alexander Osterwalder's Business Model Canvas for startups operating under conditions of extreme uncertainty.

While the original Business Model Canvas maps an existing business holistically, Lean Canvas focuses on what matters most at the early stage: **identifying and testing your riskiest assumptions before you build**.

The 12 blocks of a Lean Canvas

1. **Customer Segments** — Who has the problem and who will pay
2. **Problem** — The top 3 problems your customers face
3. **Existing Alternatives** — How customers solve these problems today
4. **Unique Value Proposition** — The single, clear message that turns a visitor into a customer
5. **Solution** — Your top 3 features that address the top problems
6. **Key Metrics** — The numbers that tell you how your business is doing
7. **Channels** — How you reach your customers
8. **Early Adopters** — The specific subset of customers you target first
9. **Cost Structure** — Your fixed and variable costs
10. **Revenue Streams** — How you make money
11. **Unfair Advantage** — What can't be easily copied or bought

12. **High-Level Concept** — The X for Y analogy that makes your idea instantly understandable

Why Lean Canvas instead of Business Model Canvas?

Lean Canvas replaces four boxes from the original BMC — Key Partners, Key Activities, Key Resources, and Customer Relationships — with startup-specific ones: Problem, Solution, Key Metrics, and Unfair Advantage.

These substitutions matter. Early-stage ventures need to understand their *problem* deeply before worrying about key partners. They need to define *metrics* before cataloging resources. Lean Canvas captures what's most uncertain — and most risky.

For a detailed comparison, see Lean Canvas vs Business Model Canvas.

Who uses Lean Canvas?

Over a million entrepreneurs, accelerators, and universities worldwide use Lean Canvas. It's a core component of the *Running Lean* methodology. Organizations like MassChallenge, Techstars, and hundreds of university programs use it to coach founders through early-stage validation.

Lean Canvas + AI

LEANSpark brings the Lean Canvas to life with AI. Instead of staring at nine empty boxes, you describe your idea in plain English. The AI builds your canvas, then stress-tests it across 7 dimensions — Clarity, Desirability, Viability, Feasibility, Defensibility, Mission, and Timing — and tells you which assumptions to validate first.

It's the only AI startup tool built by the person who invented the methodology.
